

GRACE ENE

GTM Engineer | Revenue Systems & AI Automation

graceeneglobal@gmail.com | (949) 942-2118 | Los Angeles, CA | Open to Remote
[linkedin.com/in/grace-ene](https://www.linkedin.com/in/grace-ene) | grace-ene.netlify.app | github.com/grace-ene

Revenue systems builder with 8+ years in customer success and revenue operations. Builds GTM engineering systems across RevOps, growth, and customer success: account signal pipelines, lead routing, workflow automation, and AI tools with measured accuracy. Works across Salesforce, HubSpot, Python, SQL, and APIs, and ships every system with a way to prove it works.

CORE COMPETENCIES

- Workflow Automation & Orchestration (n8n, self-hosted, retries / dead-letter queues)
- GTM Systems Architecture & CRM Governance (Salesforce, HubSpot)
- API Integrations & Python Scripting
- RAG / Vector Search & AI Evaluation (retrieval accuracy, refusal rate)
- Signal Detection, Lead Scoring & Lifecycle Modeling
- SQL & Pipeline Analytics / Forecasting
- Cross-Functional GTM Alignment (Sales, Marketing, CS, Finance)

SELECTED TECHNICAL PROJECTS (PUBLIC CASE STUDIES, PRUDIE.DEV)

Lead Routing: Form to CRM to Slack | prudie.dev/case-studies/lead-routing/

- Cut lead response time from an industry-average 42 hours to under 5 seconds; self-hosted n8n + Postgres pipeline with enrichment, scoring-based routing, retry queues for failed steps, and failure alerts with payload attached.

Knowledge Retrieval with a Measured Refusal Gate | prudie.dev/case-studies/knowledge-retrieval/

- Designed a self-hosted RAG pipeline (local LLM + vector search) that cites its source chunk on every answer; scored 92% retrieval hit rate and 100% refusal on out-of-corpus questions across a 50-question evaluation harness.

Invoice Extraction with a Human Approval Gate | prudie.dev/case-studies/document-extraction/

- OCR + local LLM drafts every field with a confidence score and six automated validation checks; hard-blocked from posting to accounting without human sign-off. No code path skips the approval step.

EXPERIENCE

Automation & AI Implementation Consultant | Prudie.dev (Independent)

Sep 2026 – Present

- Deliver self-hosted workflow automation for revenue and operations teams (lead intake, routing, follow-up, CRM sync, and reporting) on infrastructure the client owns.
- Ship every build with retries, dead-letter queues, failure alerts, and a written runbook so the system survives without ongoing involvement.
- Run AI locally where data can't leave client infrastructure, using Ollama and self-hosted vector search.

Technical Founder | Invest with Prudie (Independent)

Jun 2026 – Present

- Launched a full-stack investing-education platform solo: Supabase (auth/database), Stripe (payments), Resend (email), deployed on Netlify.
- Ran a security audit on the production database; found and closed a subscriber-email leak and a billing-sync gap in the Stripe integration.
- Wrote a custom Python publishing system generating SEO- and AEO-optimized content with structured data, cutting new-post turnaround from days to hours.
- Shipped a live event-registration system (own database table, backend function, automated unsubscribe flow), now reused as the pattern for new landing pages.

Customer Success Manager | Paubox

Jul 2025 – Present

HIPAA-compliant email security | 8,000-customer base

- Engineered a daily churn and growth signal system (Google Apps Script, HubSpot API) that scans ~1,200 accounts at \$2K+ ARR across 7 signal types (DNS changes, site redirects, M&A and leadership news, usage drops, admin turnover, contract and billing changes, support-ticket patterns) and routes new signals to the account owner in one 9am digest with a next step.
- Tuned it for signal over noise with dedupe, small-account suppression, and two-run DNS confirmation; news filters cut 269 alerts to 6, all real. A Signal Scorecard tracks follow-up rate and 90-day outcome per signal type to keep only the signals that predict churn. Runs at \$0 on read-only, PHI-safe access.
- Automated churn-risk detection for the Senior CSM team: a weekly risk report built from support-ticket data and a monthly at-risk recap with sentiment scoring.
- Shipped a Slack-native AI assistant on Vercel with Neon Postgres and the Anthropic API, deployed from the company GitHub org; wrote API integrations with Claude Code that connect HubSpot to internal tools.
- Designed the automated outreach program and lifecycle sequences for the \$5–10K ARR segment, adopted by Marketing; ran lifecycle experiments that drove 68% of Q1 2026 expansion pipeline.
- Sourced 60% of the CSM team's expansion deals in Q2 2026 and closed 38 renewals worth \$640K+.
- Retained 97% of an 87-account healthcare SaaS book (84 of 87, \$1.49M+ ARR), including a competitive save against Microsoft Exchange and a renewal that grew 3.5x.

Customer Success Manager | Webex (Cisco)

Nov 2022 – Jul 2025

\$4–5M ARR portfolio | Cross-functional alignment with Sales, Marketing, CS, and Finance

- Created a custom account health dashboard surfacing churn signals Salesforce couldn't show, driving proactive intervention and making the case for a CRM overhaul.
- Maintained a 94%+ renewal rate across six consecutive quarters through data-driven pipeline analysis and revenue-integrity processes with Finance and CS leadership.
- Rebuilt QBR preparation using AI-assisted synthesis of CRM data, usage trends, and renewal signals, cutting prep time from a full day to under two hours.
- Redesigned onboarding flows using cohort analysis and usage data, reducing customer ramp time by 60%.

Customer Success Manager | AppFolio

Jun 2020 – Nov 2022

Property Management SaaS

- Managed a 100+ client portfolio across residential, commercial, and mixed-use segments, achieving a 93% time-to-value improvement through segment-tailored onboarding.
- Increased feature adoption by 70% through structured QBRs and customized product training.

Customer Success Manager | Trainual

May 2018 – Jun 2020

SMB SaaS

- Created structured walkthroughs and a self-serve knowledge base that cut implementation time by 40% and eliminated repetitive manual sessions.
- Maintained a 93% onboarding satisfaction rate across an SMB portfolio.

TOOLS & SYSTEMS

Automation & AI: n8n (self-hosted), Python, Anthropic API, Ollama, local LLM inference, RAG / vector search, OCR pipelines, prompt engineering

CRM & RevOps: Salesforce, HubSpot, API-based integrations, Zapier, n8n

Web & Infrastructure: Supabase, Neon (Postgres), Stripe, Resend, Netlify, Vercel, GitHub, Google Apps Script

Analytics & BI: SQL, Tableau, Power BI, Amplitude, Google Analytics, Google Search Console

Experimentation: A/B testing frameworks, Optimizely, VWO, Convert, cohort analysis

EDUCATION & CERTIFICATIONS

Bachelor of Arts, Communication, University of Southern California

Certifications: A/B Testing Foundations, SQL for Data Analysis, AI Workflow Automation, HubSpot Revenue Operations, HubSpot Sales Hub Software, Salesforce CRM Basics
